2.1	Quick Start Guide: Enapter Application for iOS	2020-05-13

Installing the application

1. Please ensure that your Bluetooth is enabled on your device and it is connected to the Internet over Wi-Fi. You also have to know your Wi-Fi network name (SSID) and your Wi-Fi password.
Please note that the Wi-Fi signal should be 2.4 GHz. Check that an antenna is securely connected to the communication module and located outside of any metal constructions. You must place your mobile device as close as possible to the Enapter system you are trying to connect to.
2. You should be logged into your Apple ID account on your device. If you haven't done this yet, follow steps on the page <https://support.apple.com/en-us/HT201762> - iOS
3. Run the browser on your device and navigate to <https://app.enapter.com> (URL for mobile device only).

The redirection link should appear. Press "Open" button.

Account Creation and Login

1. To start using the application you need an account in the Enapter Cloud. If you already have an account, simply skip this step.
To create an account click on “Create account” button of the first screen.

2. Enter a valid email and password you would like to have in Enapter Cloud and press “Sign up” button.

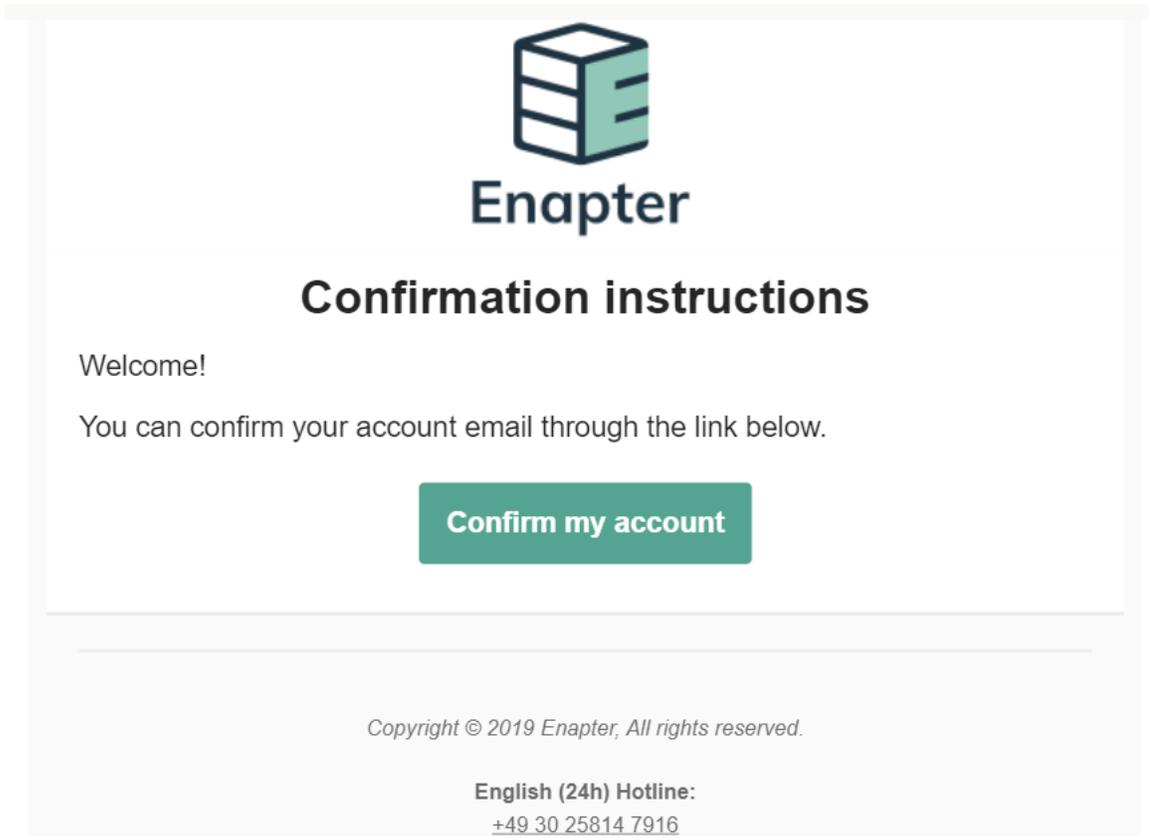

Enapter

Adding sites and devices

1. After logging into your account for the first time, the application will ask you to create a site. Sites are location-based representations of your setup.

2. Give your site a name, location and change the automatically detected time zone if it's not correct. Then press "Create Site".

3. Your site acts as the main screen of application (to create a new site or select another site to press the Sites at the left bottom of the screen).

4. To add a new device (Electrolyser, Dryer, Gateway, etc) to your site press the "Add new device" button.

If the application is launched for the first time, additional system permissions will be requested in order to use the camera with the app. Please allow them.

Ensure that the iOS device with the app is located close to the systems. When the QR code scanner screen will open, point your device camera to the QR code so it is
